

Lazard Next Gen Technologies ETF - TEKY

1Q26

LAZARD
ASSET MANAGEMENT

The **Lazard Next Gen Technologies ETF – TEKY** seeks long-term capital appreciation by investing in the innovation leaders across the AI Tech Stack that will enable the next generation of automation applications. Companies in the investable universe offer the relevant AI value chain exposure that aims to increase the productivity of their clients' business processes. The strategy opportunistically invests in approximately 40-60 global securities.

Performance Review

(%; net of fees. As of March 31, 2026)

	3M	YTD	Since Inception 4/4/25
TEKY ETF - NAV	-10.80	-10.80	33.73
TEKY ETF - Share Price (SP)	-9.86	-9.86	35.28
Benchmark	-3.57	-3.57	29.68

The performance quoted represents past performance. **Past performance does not guarantee future results.** Performance for periods shorter than one year has not been annualized. Performance presented is net of fees. The current performance may be lower or higher than the performance data quoted. An investor may obtain performance data current to the most recent month end online at www.lazardassetmanagement.com. The investment return and principal value of the Portfolio will fluctuate; an investor's shares, when redeemed, may be worth more or less than their original cost. Had expenses not been reimbursed, returns would have been lower, and the expense ratio would have been higher. The index is unmanaged and has no fees. One cannot invest directly in an index.

Team membership is current as of March 31, 2026. Personnel data are calculated as of year-end 2025.

Disclosures

Important Information

Published on April 15, 2026.

Information and opinions presented have been obtained or derived from sources believed by Lazard to be reliable.

The financial data presented is provided by external sources. Lazard Asset Management LLC takes reasonable care to ensure that the information provided is correct, but it neither warrants, represents nor guarantees the content of the information nor does it accept responsibility for errors, inaccuracies, omissions or inconsistencies.

Investing Involves risk, including the loss of principal. **Next Generation Technologies Companies Risk:** The Portfolio invests primarily in the equity securities of Next Generation Technologies Companies and, as such, is particularly sensitive to risks to those types of companies. These risks include, but are not limited to, small or limited markets for such securities, changes in business cycles, world economic growth, technological progress, rapid obsolescence and government regulation. Securities of Next Generation Technologies Companies, especially smaller, start-up companies, tend to be more volatile than securities of companies that do not rely heavily on technology. Rapid change to technologies that affect a company's products could have a material adverse effect on such company's operating results. **Non-US Securities Risk:** The Portfolio's performance will be influenced by political, social and economic factors affecting the non-US countries and companies in which the Portfolio invests. Non-US securities carry special risks, such as less developed or less efficient trading markets, political instability, a lack of company information, differing auditing and legal standards, and, potentially, less liquidity. **Emerging Market Risk:** Emerging market countries generally have economic structures that are less diverse and mature, and political systems that are less stable, than those of developed countries. The economies of countries with emerging markets may be based predominantly on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme debt burdens or volatile inflation rates. **Non-Diversification Risk:** The Portfolio's net asset value may be more vulnerable to changes in the market value of a single issuer or group of issuers and may be relatively more susceptible to adverse effects from any single corporate, industry, economic, market, political or regulatory occurrence than if the Portfolio's investments consisted of securities issued by a larger number of issuers.

Market Risk: A Portfolio may incur losses due to declines in one or more markets in which it invests. These declines may be the result of, among other things, political, regulatory, market, economic or social developments affecting the relevant market(s). In addition, turbulence in financial markets and reduced liquidity in equity, credit and/or fixed income markets may negatively affect many issuers, which could adversely affect the Portfolio. Global economies and financial markets are increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. These risks may be magnified if certain events or developments adversely interrupt the global supply chain; in these and other circumstances, such risks might affect companies worldwide. As a result, local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issue, recessions or other events could have a significant negative impact on global economic and market conditions.

Definitions: **Forward-looking figures** represent expected returns. Expected returns do not represent a promise or guarantee of future results and are subject to change. **Free cash flow yield** is calculated by dividing the free cash flows of the company by its price per share. **P/E** calculates the price of a stock divided by its earnings per share. **P/E** calculates the price of a stock divided by its earnings per share.

The MSCI World Index is a free-float-adjusted market capitalization index that is designed to measure global developed market equity performance comprised of developed market country indices. The index is unmanaged and has no fees. One cannot invest directly in an index.
