### Important Information

The tables show, for the calendar years from 2001 to 2020, the top-five and bottom-five returning country indices that, in part, comprise the MSCI Emerging Markets Index. The MSCI Emerging Markets Index is a free-float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. The MSCI Emerging Markets Index consists of 27 emerging-market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates. The index is unmanaged and has no fees. One cannot invest directly in an index. Return numbers represent the entire year, even if a country entered mid year. Equity securities will fluctuate in price; the value of your investment will thus fluctuate, and this may result in a loss. Securities in certain non-domestic countries may be less liquid, more volatile, and less subject to governmental supervision than in one's home market. The values of these securities may be affected by changes in currency rates, application of a country's specific tax laws, changes in government administration, and economic and monetary policy. Emerging and developing markets can face significant political, economic or structural challenges. The portfolio may experience delays in buying, selling and claiming ownership of investments and there is an increased risk that the portfolio may not get back the money invested. The information provided herein should not be considered a recommendation or solicitation to purchase, retain or sell any particular security. It should also not be assumed that any investment in these securities was or will be profitable. Credit: Callan Associates Inc. and the Callan Periodic Table of Investment Returns. Data Sources: MSCI. Data for individual countries for 2001 came from MSCI Price Indices, which measure market price performance only (as the sum of the free-float-weighted market capitalization returns of all its constituents on a given day). Data from 2002 through 2016 came from MSCI Net Dividend Reinvested Indices, which measure market performance, including price performance and income from tax-adjusted dividend payments. The performance quoted represents past performance. Past performance is not a reliable indicator of future results. An investment cannot be made directly in an index. Indices are unmanaged and have no fees. Certain information included herein is derived by Lazard in part from an MSCI index or indices (the "Index Data"). However, MSCI has not reviewed this product or report, and does not endorse or express any opinion regarding this product or report or any analysis or other information contained herein or the author or source of any such information or analysis. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any Index Data or data derived there from. The MSCI Index Data may not be further redistributed or used as a basis for other indices or any securities or financial products.
