### Composite Description

The composite returns represent the total returns of all fully discretionary portfolios with a Digital Health mandate. The Strategy is managed in a benchmark agnostic manner to allow focus on the disruption-driven opportunity set. However, over a multi-year period we expect the Strategy to outperform a broad global equity index such as the MSCI World Index. The Digital Health strategy seeks to capitalize on the disruption of the health care ecosystem by investing in companies leading technological advancements inside and around the industry. The strategy aims to capture this opportunity in a sector-agnostic way with a portfolio of attractively valued firms participating in different aspects of the disruption continuum. The Strategy offers a focused exposure to key disruptive trends in health care such as, digitization and the use of data, personalization of medicine, advancements in diagnostics, and the prospects for higher longevity / enhanced aging. Performance prior to November 2020 represents the strategy managed by the team at a prior firm and comprise substantially of all the investment decision makers of that team. The team employs the same investment strategy to manage the Digital Health strategy as it did at its prior firm.

### Calculation of Performance Returns

The composite and benchmark returns are reported net of foreign withholding taxes on dividends, interest and capital gains. The composite returns presented represent past performance and is not a reliable indicator of future results, which may vary.

### Fee Schedule

Lazard's standard fee schedule for Digital Health accounts is 0.75% on the first \$50 million, 0.50% on the next \$50 million, and 0.45% on the balance. (This fee schedule may be presented in non-U.S. local currency equivalents based on prevailing exchange rates.) Unless otherwise noted, actual account fees, inclusive of performance-based fees and VAT (if applicable) are used in the construction of composite net of fee performance. For non-fee paying portfolios and sleeves of funds, net of fee performance has been calculated using the strategy's standard fee schedule.

### Benchmark Information

The MSCI World Index is an arithmetic, market value-weighted average, net of withholding taxes index, which is derived from equities of EAFE Index countries plus equities from Canada and the United States. The Index is compiled by MSCI Inc.
