NYSE Symbol	LGI
First Day of Trading	4/28/2004
Inception NAV (\$)	19.06
Inception Share Price (\$)	20.00

Commentary

During February, the NAV return of the Lazard Global Total Return and Income Fund (the “Fund”) was 4.4%, outperforming the MSCI All Country World Index (MSCI ACWI)⁴ return of 4.3%. For the year-to-date, the NAV return of 3.1% is behind the MSCI ACWI Index return of 4.9%. The since-inception annualized NAV return of 7.5% is below the 7.7% return on the Fund’s benchmark index (MSCI ACWI and MSCI World Index linked⁵).

Global equity markets advanced in February, as strong earnings results, particularly in the US, bolstered risk appetites. Enthusiasm was tempered by ongoing uncertainty about the timing of interest rate cuts from key central banks. Stocks in both the developed and developing markets gained, with the latter outperforming the former. In the US, equities outperformed other major regions, as 72% of the stocks in the S&P 500 registered gains, although a handful of mega cap technology stocks accounted for much of the index’s strong performance. European stocks advanced but lagged the broader global market index, amid lackluster quarterly earnings results. In Japan, stocks reached a record high, as investors speculated that the Bank of Japan would maintain its negative interest rate policy stance. In China, equities rose sharply after Chinese authorities announced additional measures to boost confidence in the country’s stock market. In February, the Fund benefitted from security selection in the health care sector and within Switzerland. Conversely, security selection in the communication services and industrials sectors and within Japan detracted from relative performance.

Performance for the smaller, short duration emerging market currency and debt portion of the Fund was approximately flat in February and is negative for the year-to-date.

Investment Objective

The Fund's investment objective is total return, consisting of capital appreciation and current income. The Fund's net assets are invested in a portfolio of approximately 60 to 80 US and non-US equity securities, including American Depositary Receipts, generally of companies with market capitalizations greater than \$2 billion, and may include investments in emerging markets. The Fund also invests in emerging market currencies (primarily by entry into forward currency contracts), or instruments whose value is derived from the performance of an underlying emerging market currency, and also may invest in debt obligations, including government, government agency and corporate obligations and structured notes denominated in emerging market currencies.

Regional Exposure

Risks

Past performance does not guarantee future results. Prices and rates will fluctuate with changes in market conditions. Distributions are subject to recharacterization for tax purposes after the end of the fiscal year. If the Fund pays distributions in excess of its net investment income, this excess could be a return of capital. Past distributions have included ordinary income, net capital gains, and/or a return of capital. A return of capital does not necessarily reflect a fund's investment performance and should not be confused with yield or income.

Risk factors include:

Investment and Market Risk. An investment in the Fund's Common Stock is subject to investment risk, including the possible loss of the entire principal amount invested. An investment in Common Stock represents an indirect investment in the Fund's portfolio investments. Their value, like other market investments, may move up or down, sometimes rapidly and unpredictably.

The Fund's Common Stock, at any point in time, may be worth less than the amount originally invested, even after taking into account the reinvestment of Fund dividends and distributions. The Fund's investment strategy includes purchasing investments that have embedded financial leverage, such as forward currency contracts, which magnifies the risk that you may lose money.

Leverage Risk. Using leverage is a speculative investment technique and involves certain risks. These include higher volatility of net asset value, the likelihood of more volatility in the market value of Common Stock and the possibility either that the Fund's return will fall if the interest rate on any borrowings rises, or that income will fluctuate because the interest rate of borrowings varies. If the market value of the Fund's portfolio declines, the leverage will result in a greater decrease in net asset value than if the Fund were not leveraged. Such greater net asset value decrease also will tend to cause a greater decline in the market price for Common Stock.

Non-U.S. and Emerging Markets Investments Risk. The Fund may invest in securities of non-US issuers operating in developed countries. These investments involve special risks, including the following: less publicly available information about non-U.S. issuers or markets because of less rigorous disclosure or accounting standards or regulatory practices; many non-US markets are smaller, less liquid and more volatile; the economies of non-U.S. countries may grow at slower rates than expected or may experience a downturn or recession; and the impact of economic, political, social or diplomatic events.

The Fund may also invest in emerging markets securities. Particular risks include: smaller market capitalization of securities markets; significant price volatility; restrictions on foreign investment; and possible seizure of a company's assets. In addition, foreign investors may be required to register the proceeds of sales. Future economic or political crises could lead to price controls, forced mergers, expropriation or confiscatory taxation, seizure, nationalization, or creation of government monopolies, all of which may affect currencies adversely.

Investing in sovereign debt securities will expose the Fund to the direct or indirect consequences of political, social or economic changes in the emerging market countries that issue the securities. Many of these countries are also characterized by political uncertainty or instability. The ability and willingness of sovereign obligors in emerging market countries or the governmental authorities that control repayment of their debt to pay principal and interest on such debt when due may depend on general economic and political conditions within the relevant country. Countries in which the Fund intends to invest have historically experienced, and may continue to experience, high rates of inflation, high interest rates, exchange rate fluctuations, trade difficulties and extreme poverty and unemployment.

The market values of corporate debt securities are sensitive to individual corporate developments and changes in economic conditions. Emerging market issuers may be highly leveraged and may not have more traditional methods of financing available to them. Therefore, their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired, resulting in a higher risk of default.

Currency Risks. An investment in Common Stock, as measured in US dollars, may change significantly when the values of the emerging market local currencies change relative to the US dollar, thereby subjecting investors to currency risks. The currencies of emerging market countries may experience significant declines against the US dollar, and significant devaluation may occur subsequent to investments in these currencies by the Fund. Other risks include the dependence on the Investment Manager's ability to predict movements in exchange rates and imperfect correlations between movements in exchange rates. The Fund may use currency hedging transactions which might result in a poorer overall performance for the Fund than if the Fund had not engaged in any hedging transactions.

Currency Investments could be adversely affected by delays in, or a refusal to grant, repatriation of funds or conversion of emerging market currencies. Forward currency contracts are highly volatile, and a relatively small price movement in a forward currency contract may result in substantial losses to the Fund.

Forward Currency Contract. A contract for the purchase or sale from a counterparty of a specified currency at a specified future date. Such contracts may involve the purchase or sale of the local currency against the U.S. dollar or may involve the local currency and another developed market base currency.

Net Asset Value Per Share. An expression for net asset value that represents a fund's (mutual, exchange-traded, and closed-end) or a company's value per share. The Fund's Net Asset Value Per Share is calculated by dividing its total net asset value by the number of shares outstanding.

Total Leveraged Assets. The Fund's Net Assets, increased by financial leverage employed by the Fund, which is (1) the amount the Fund has drawn from its available line of credit and (2) the notional value of forward currency contracts the Fund enters into.

Leveraged Percentage. The Fund's financial leverage as a percentage of the total of its Total Leveraged Assets.

Notes

1 Past performance does not guarantee future results. The NAV results are calculated using the Fund's Net Asset Value per share and assumes reinvestment of all distributions. NAV performance data shown reflects the deduction of the Fund's operating expenses, which include (but are not limited to): management fees, professional services, and custodian and administration fees. The Fund's inception date was April 28, 2004.

2 Data is based on the Fund's holdings as of February 29, 2024, which are subject to change in the future.

3 The Distribution Rate is calculated by dividing the annualized monthly distribution by the share price shown above. The monthly distribution is established by the Fund's Board of Directors at the beginning of each year pursuant to a level distribution policy. Under the policy, in an effort to seek to maintain a stable monthly distribution to shareholders, the Fund makes regular monthly distributions at a fixed rate per share. The Policy may have the effect of causing anyone (or more) of such distributions to be made from the Fund's assets as a return of capital if Fund income and realized capital gains were less than the amount(s) distributed. In addition, in order to make such distributions, the Fund might also have to sell a portion of its investment portfolio at a time when independent investment judgment might not dictate such action. Based on current information, 100.0% of the year-to-date cumulative distributions are estimated to be comprised of return of capital. It is important to note that an investment in shares of the Fund is not comparable to a fixed-income investment such as a bond or a note. The Policy is subject to change or may be discontinued in the Board's discretion.

The MSCI data may not be further redistributed or used as a basis for any other indices or any securities or financial products. This report is not approved, reviewed, or produced by MSCI.

5 The Fund's benchmark index is the MSCI World Index/MSCI ACWI (Linked), an unmanaged index created by the Fund's investment manager which links the performance of the MSCI World Index until September 1, 2016 (when the Fund's investment strategy changed) and the MSCI ACWI beginning September 1, 2016.

6 The identification of certain securities should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable. Allocations are subject to change.

7 Asia ex-Japan includes Australia.

8 A measure of the average cash-weighted term-to-maturity of the investment holdings. Duration is a measure of the price sensitivity of a bond to interest rate movements. Duration for a forward currency contract is equal to its term-to-maturity.

The information provided in this material should not be considered a recommendation to purchase or sell any security. There is no assurance that any securities referenced herein will remain in the Fund's portfolio or that securities sold have not been repurchased. The securities discussed may not represent the Fund's entire portfolio.

It should not be assumed that any of the referenced securities were or will prove to be profitable, or that the investment decisions we make in the future will be profitable.
